AZterknot 3-in-1 Fungicide Combines Biological and Chemical with Allosperse

AZterknot fungicide is a perfect fit for potato growers.

AZterknot™ fungicide now allows potato growers to get the plant health benefits of Reynoutria extract (biofungicide), the disease-fighting power of azoxystrobin and the Allosperse delivery system for ease of use and handling.

AZterknot fungicide is recommended prior to row closure as a substitute for Headline®, Quadris® or Priaxor® for control of blights, black dot, and powdery mildew. It activates the plant's natural defenses to inhibit pathogen growth and improves plant health, quality, and yield.

Why choose AZterknot?

- It harnesses the power of both chemical and biological actives
- A smart resistance management tool – contains Groups 11 and P5
- It provides disease control, plant health benefits and yield enhancement activity
- Flexible application options – through chemigation or with foliar feeds
- Biological activity increases yield and quality better than chemistry alone
